<b>1</b>	<b>stzxyz</b>	<b>1</b>
1.	This routine is a “copy” of <a href="#">co01aa</a> , which calculates the coordinate information on a regular, discrete grid in $\theta$ and $\zeta$ at given $s$ ; whereas <a href="#">stzxyz</a> calculates the coordinate information at a single point $(s, \theta, \zeta)$ .	
2.	Please see <a href="#">co01aa</a> for documentation.
