## stzxyz

briefly

[called by: pp00ab.]

## contents

1 stzxyz

1. This routine is a "copy" of co01aa, which calculates the coordinate information on a regular, discrete grid in  $\theta$  and  $\zeta$  at given s; whereas stzxyz calculates the coordinate information at a single point  $(s, \theta, \zeta)$ .

2. Please see collaa for documentation.
